

Work with more intelligence.

If DaVinci were around today, he'd probably be working with us.

Leonardo would thrive at *ST* — in an environment that encourages creativity. Where his innovations would lead to new technologies and products that could change the world.

At *ST* we design and manufacture innovative microchips for just about everything.

Each year *ST* recruits thousands of people around the world to work in microelectronics research, circuit design, process and product engineering, manufacturing, electronic applications, marketing, sales, information systems and quality control.

STMicroelectronics. At the very center of the digital revolution. Right where you belong.

We put more intelligence into everything.

STMicroelectronics (formerly SGS-THOMSON) • www.st.com • A world leader in semiconductors for consumer products, automotive, telecommunications, computer peripherals, industrial automation and control systems.
